### Morrison's Cabinets

When sourcing a cabinetmaker for our recent extension I followed the advice of some good friends and contacted David Morrison at Morrison's Cabinets.

David sat down with us and looked at the plan. He was very attentive to what we envisaged for the new upstairs kitchen family room. In his own quiet way he suggested a structural change to the dividing wall, and then set to sketching out a functional kitchen which has clean lines and balance.

Down stairs we simply thought of a kitchenette, but David asked what the area will actually be used for. He then set to sketching on the bare gyprock wall what he "conceived" it could be. We now have a great "bar area" which really sets off the entertainment area.

As the building progressed David's next challenge was to come up with a high display cabinet, bench and storage cabinets to be in keeping with the formal dining room it was to be set in. This he did with subtle use of colour and texture, which separates the old from the new.

We appreciated David's concepts and designs, the use of colour and texture which he brought, along with his quiet thought full manner.

Finally the installed cabinets mirror the exacting detail which David applies to the whole process.

I commend MORRISON'S CABINETS to you. They come with concepts design colour and features, all drawn together with David's experience.
